

ETHAN (TAEHOON) LEE

US Permanent Resident · ethantlee21@gmail.com · taehoonlee.dev · linkedin.com/in/ethantlee · github.com/thdxg

EDUCATION

Carnegie Mellon University

MS in Computer Science

Pittsburgh, PA

Expected May 2028

Emory University

BS in Computer Science

Atlanta, GA

May 2026

• **Honors:** 3.99/4.0 GPA, Summa Cum Laude, 2x James T Laney Scholarship, 5x Dean's List, Phi Beta Kappa honor society

SKILLS

- **Languages:** Go, TypeScript, JavaScript, C, Rust, Java, Python, SQL, HTML, CSS, Bash
- **Technologies:** Kubernetes, Linux, Docker, Helm, ArgoCD, Ansible, Prometheus, OpenTelemetry, Grafana, Git, AWS (S3, Lambda, Cloudfront), GCP (Cloud Run, AlloyDB), Cloudflare (Workers, R2), Redis, SQLite, PostgreSQL

WORK EXPERIENCE

Founding Engineer

Huddle Surety (Techstars Pre-Accelerator)

Atlanta, GA

Sep 2025 – Present

- Architected a multi-tenant polyglot microservices platform using Go and Python, orchestrating complex distributed data transaction state machines via Temporal to guarantee strict transactional atomicity across all application deployments
- Engineered a multi-stage RAG pipeline leveraging pgvector and semantic search to parse complex legal documents, increasing processing accuracy to 95% and automating 90% of manual underwriting workflows in surety agencies
- Provisioned a high-availability cloud infrastructure monitored by the LGTM stack, maintaining 99% uptime in production

Software Engineering Intern (Cloud Infrastructure)

UKG

Atlanta, GA

May 2025 – Aug 2025

- Developed a production-grade REST API in Go utilizing a producer-consumer worker pool to concurrently aggregate the real-time network health of 200+ MongoDB, MySQL, and RabbitMQ VM deployments across 4 geodistributed datacenters
- Automated TLS certificate validation lifecycle via Kubernetes CronJobs, accelerating the biannual renewal process by 70%
- Implemented distributed observability by provisioning Prometheus Blackbox Exporters across isolated OpenStack tenants

Software Engineering Intern (Full Stack)

eStreamly

Atlanta, GA

Jun 2024 – Aug 2024

- Optimized global state management and client-side caching using TypeScript and Angular, reducing page latency by 40%
- Automated container image release pipelines utilizing GCP Cloud Build, streamlining CI/CD and reducing production time

PROJECTS

Spotify Warped: HCI Research & Publication

dl.acm.org/doi/10.1145/3772318.3790875

- Co-authored and published at ACM CHI 2026, architecting scalable data aggregation systems to analyze how computational feedback loops and algorithmic tracking metrics influence automated user engagement patterns across digital media
- Built high-throughput data processing pipelines in Python to ingest and analyze 100 GB of granular Spotify streaming logs

Kubernetes Homelab

github.com/overburrow

- Architected a bare-metal K3s cluster using Ansible for provisioning and ArgoCD for declarative GitOps deployment
- Configured Cilium CNI as a complete kube-proxy replacement to optimize cluster performance, leveraging Kubernetes Gateway API to implement fine-grained traffic routing through isolated public and private entry points across nodes

Macterm: Native MacOS Terminal Emulator

github.com/thdxg/macterm

- Built a native macOS terminal in SwiftUI on top of libghostty with comprehensive multiplexing, earning 200+ GitHub stars
- Designed an end-to-end agentic workflow with custom commands and skills for development, issue triage, and releases

Emory Hacks: Emory University's Hackathon Organization

emoryhacks.com

- Co-founded and developed annual hackathon website, attracting 300+ participants and \$20K+ sponsorship over 2 years
